LogRhythm Focuses on Cyber Security as Middle East Companies Suffer Larger Losses Than Global Counterparts

Mohan Raj hired to address these challenges and raise awareness about growing Cyber Security threats

Dubai - Mar 08, 2018: According to a study released by PwC¹ that surveyed 300 companies from 20 Middle Eastern countries about the state of cyber-security threats in the region, 56% of the companies lost more than AED1.85 million compared to 33% globally, and 13% lost at least three working days, compared to 9%.

“The rapid growth of business in the region has placed stress on technology infrastructure and put them front and center of global cyberthreats and attacks,” said Mohan Raj, Regional Sales Manager – UAE, Bahrain and Oman, who was recently hired by [LogRhythm](http://www.tcfnewswire.net/en/company/logrhythm).

Prior to joining LogRhythm, Mohan Raj ran the Cyber Security Solutions business at one of the largest system integrators in the region, handling enterprise customers in government, banking, aviation, energy and utilities.

“Companies in this region have been investing heavily in security technology, especially over the past five years. However, as cyber-attacks grow in frequency and sophistication, more vigilant security processes and governance have become essential to thwarting attacks,” he continued.

[Digital security](http://www.tcfnewswire.net/en/company/logrhythm/features/how-can-the-energy-sector-fight-cyber-threats-and-attacks-from-hackers) is not an IT department issue, it is a business issue that needs board level oversight and responsibility. “The risk of suffering financial and reputational damage is very real. Small and large businesses need to make sure they are protected from cyberthreats.”

Mohan Raj is an engineering graduate in Electronics and Communication from Anna University in India and holds multiple professional specializations such as CISA from ISACA – USA, PMP (Project Management Professional) from PMI-USA.
